

Pinpoint Calibration System™

SmartWashSolutions™
Pinpoint Calibration System 

Improve the performance of your chlorine wash line with the patent-pending Pinpoint Calibration System

Using the Pinpoint Calibration System ensures a consistent baseline to calibrate and verify the accuracy of your chlorine sensors.

Our advanced technology yields faster results and is proven to be more accurate than legacy manual calibration methods, saving time, labor and money.

EASY

Integrating the Pinpoint Calibration System into your existing operations is easy! Setup, testing and calibration are faster and easier than alternative methods and require less training for calibration. The Precision Chlorine Sensor Calibrator and Chlorine Standard Testing Solution are compatible with any control system that uses chlorine sensors. Permanent installation is not required, and one or two portable Precision Chlorine Sensor Calibrators can maintain the accuracy of wash control systems in an entire processing plant.

ACCURATE

Turbid wash water and operator testing proficiency affect the accuracy of legacy calibration methods. The Precision Chlorine Sensor Calibrator bypasses the production wash system and the Chlorine Standard Testing Solution creates a consistent, accurate and repeatable baseline to test and calibrate against. Results are accurate and precise every time!

EFFICIENT

Test, calibrate and verify chlorine sensors in minutes without the need to shut down the line with the SmartWash Pinpoint Calibration System. Increased accuracy, precision and repeatability reduce testing and unnecessary calibration while elimination of manual testing reduces the material costs needed to verify equipment and wash line performance. One staff member can verify performance for an entire production plant versus the multiple staff needed to support manual verifications. The need for constant water checks is eliminated.

Call 831.676.9750 to find out more information about integrati

Line-based process control systems with Pinpoint Calibration System by SmartWash Solutions™.

The Pinpoint Calibration System saves time, labor and money and is compatible with all chlorine process control automation systems.

Incorporate the Pinpoint Calibration System into your chlorine-based wash line and processing operations and you'll enjoy the benefits of increased accuracy and efficiency.

Easy, Accurate and Efficient!

CHLORINE STANDARD TESTING SOLUTION

Setting the standard has never been so easy. The Chlorine Standard Testing Solution by SmartWash Solutions eliminates guesswork and reduces human error from the process of testing, calibrating and verifying chlorine sensors – EVERY TIME!

Integrating the Pinpoint Calibration System into your Process Control.

About SmartWash Solutions

SmartWash Solutions is an industry leader in process control and food safety automation, providing technologies for maximum control and throughput. SmartWash Solutions was founded on the conviction that food safety and efficient process control go hand in hand. We are dedicated to finding breakthrough technologies and solutions that realize our vision and result in the prevention of recurring outbreaks of food-borne illness while at the same time, improving operations to guarantee a healthy return on investment. Our facility in Salinas, California is equipped with a full laboratory for conducting research and verifying test results and a commercial-scale wash system for demonstrating the effectiveness of our food wash enhancer with a variety of commodities.
