

A REVOLUTIONARY ADVANCEMENT in Precision Control of Water Chemistry

ASAP Solo

ASAP Solo brings the most precise and accurate process control system on the market to facilities that don't require the full capabilities of SmartWash Solutions' ASAP (Automated SmartWash Analytical Platform).

ASAP SOLO IS THE PERFECT PROCESS CONTROL SOLUTION FOR:

PRODUCE WASH LINES

Get control of your wash line water chemistry while protecting your brand, increasing throughput and meeting FSMA food safety requirements. ASAP Solo, combined with SmartWash Solutions' conventional or organic wash aids, improves antimicrobial efficiency while mitigating waterborne cross-contamination.

REACTION TANKS

If you are using reaction tanks to remove monochloramines from municipal water, the ASAP Solo will eliminate the guess work. The ASAP Solo system automates the process for maintaining the proper chemistry to ensure the reaction tank can remove the chloramines as efficiently as possible.

COLD WATER STORAGE

Treat cold water storage to the desired pH and chlorine levels for processing. Water will be pretreated for use in single pass processing or for filling wash lines.

WASTEWATER TREATMENT

Easily monitor, maintain standards and maximize efficiency in the treatment of wash line wastewater prior to discharge into sewer systems.

ASAP Solo easily integrates into existing systems, measuring and reporting temperature and monitoring and controlling pH and chlorine by precisely injecting calculated amounts of chlorine and SmartWash chemicals to ensure optimal levels of each.

ASAP Solo

With the ASAP Solo, there is an alternative that saves on cost.
